

# Company introduction

Profit Software offers a suite of web-based software products that allow insurers, banks and financing companies to create and provide life and pension insurance services, as well as long-term savings agreements.

## Profit Life&Pension

Our flagship product, Profit Life&Pension, is a suite of configurable, web-based software modules that cover all the back-end and front-end processes of a life, pension, risk or savings business. Built on a single platform, our products are quick to implement, cost effective to run and easy to maintain.

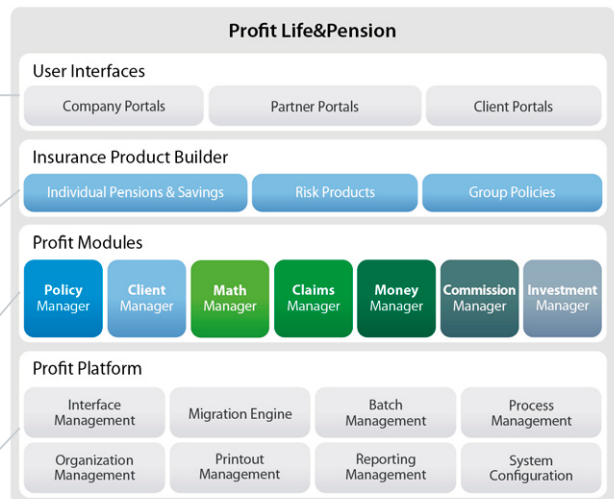

Standardized **User Interfaces** allow the solution to be easily integrated with multiple different technical environments

The **Insurance Product Builder** is a vast set of preconfigured parameters that enable the user to quickly and easily create new insurance services in the areas of individual pensions and savings, risk products and group policies

At the core of the system lie the **Profit Modules**, a suite of configurable software packages that cover all the back-end and front-end business processes required in a modern insurance operation

The **Profit Platform** enables the integration of multiple different applications and service channels through ready-made configurations

- Established in 1992
- Approximately 110 employees
